Take Home Assignment

Problem statement :

-> Develop a web application which shows the statistics of Covid- 19 cases by country wise.

Features:

-> As a user, I should be able to see a list of all countries along with active Covid-19 cases.

-> The user should be able to filter the list based on country.

Technologies to be used:

-> Any Languages of your choice

The application should be delivered to Techolution:

-> If possible deploy on free web hosting platforms and give the URL to Techolution for Testing.

-> If public hosting is not possible, make a video of the application running on your local system and share the video link uploaded in the drive.
